# Histórico da Estimulação Cardíaca

- ✓ 49 d.C Scribinius Largus – primeiro relato de utilização de corrente elétrica para tratamento de cefaléias e doenças reumáticas.
- ✓ 1.771 Morgani – relato da associação entre epilepsia e bradicardia.
- ✓ 1.883 Walter H. Gaskell – bloqueios cardíacos (AV)
- ✓ 1.887 Augustus D.Waller – Primeiro ECG

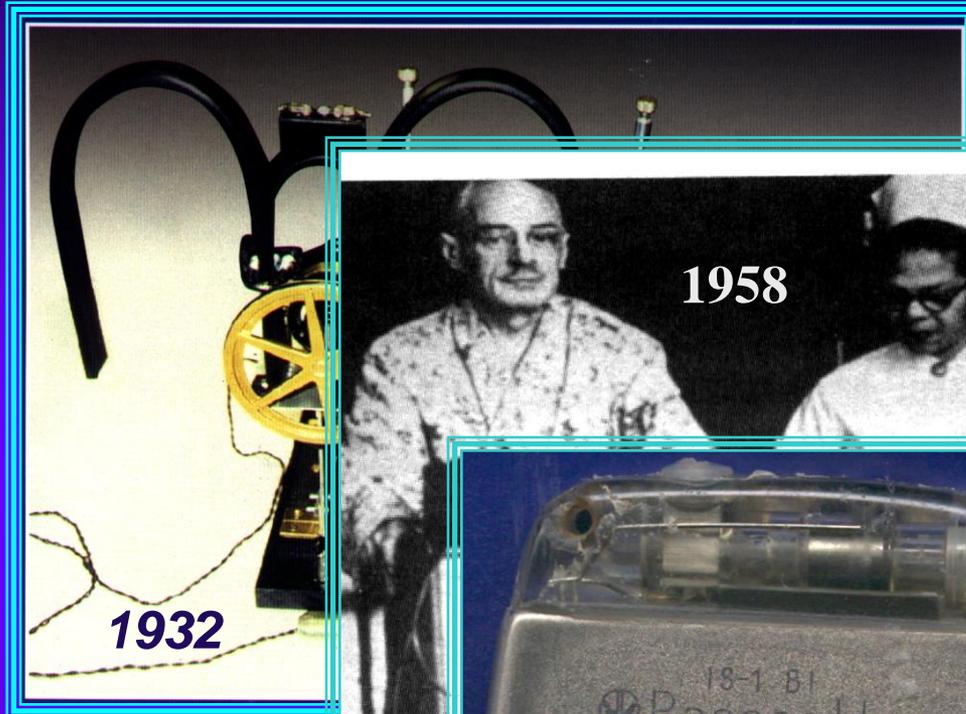

# Histórico da Estimulação Cardíaca

- ✓ 1932 Albert Hyman – Primeiro marcapasso a manivela
- ✓ 1.958 Furman – marcapassos endocárdicos provisórios
- ✓ 1.964 Hugo Felipozzi – primeiro implante de marcapasso no Brasil.

# MARCAPASSO

- ◆ **Conceito**
- ◆ **Tipo gerador: Implantável (definitivo) ou temporário (provisório)**
- ◆ **Tipo de eletrodo:**
  - endocárdico ou epicárdico
  - unipolar ou bipolar
  - fixação ativa ou passiva
  - provisório ou definitivo

# Marca-passos Definitivos

## Geradores

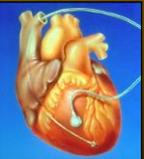

-Cabeçote

-Circuito eletrônico

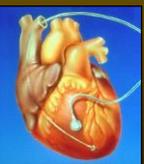

-Bateria (5 a 7 anos)

# Orientações após implante de marcapasso

- ◆ Dieta como antes do implante
- ◆ Curativo permanece por dois dias. Não há pontos externos para serem retirados. Limpar apenas com água e sabão
- ◆ Por 3 semanas, o paciente não deverá elevar ou realizar esforço físico com ombro do lado do marcapasso implantado. Pode fazer caminhada
- ◆ Relações sexuais poderão ser realizadas, tomando cuidado para não erguer o ombro do lado do implante do marcapasso
- ◆ Aparelhos eletrodomésticos podem ser utilizados normalmente. O celular poderá ser usado no lado oposto ao que foi implantado o marcapasso
- ◆ Não utilizar colchões ou travesseiros magnéticos. Não passar por portas detetoras de metais em bancos ou aeroportos
- ◆ Entregar a carteirinha de identificação, livreto do paciente e carta com as orientações
